Jaspersoft® Studio is editing software for JasperReports®, It will help you design and run report templates; build report queries; write complex expressions; layout components like 50+ types of charts, maps, tables, cross tabs, custom visualisations. It integrates JasperReports® Server to create powerful report workflows. You can build documents of any complexity from your data. Print-ready PDFs to interactive dynamic HTML with navigation inside or outside the report. High quality PowerPoint, RTF, Word, spreadsheet documents or raw CSV, JSON, or XML. It's not difficult to build custom exporter so suit any need. Different types of data sources are accessible, big data, CSV, Hibernate, JasperSoft Domain, JavaBeans, JDBC, JSPN, NoSQL, XML, or custom data source. Available as an Eclipse plug-in or a standalone application, it comes in two editions: Community and Professional. The Professional edition includes additional features, maps, advanced HTML5 charts and professional support. Page 2

This project is based on Spring Boot and Maven with "batteries included": all the necessary resouces (library dependencies, database and Jasper Reports) are included. To play with this project you just need to clone it, call the maven wrapper and (if everything goes fine) open the PDF generated report..

Spring Boot : (v2.0.6.RELEASE) How to run this project if you just want to run this example, you don't need any IDE (Eclipse/Netbeans[Intelli]). Assuming user are running Linux, you just need these lines:  
\$ git clone \$ cd jasper-examples \$ ./mvnw spring-boot:run -D xdg-open=/tmp/report.pdf/pdf details Database For this project I created a very simple SQL database using the MySQL server with one table and some data.  
The database has the following columns: Tabla de Clientes Name Type Constraints ID INT(4) PRIMARY KEY Codigo VARCHAR(10) NOT NULL Nombre VARCHAR(50) NOT NULL Apellido VARCHAR(50) NOT NULL Direccion VARCHAR(100) NOT NULL Telefono VARCHAR(20) NOT NULL Email VARCHAR(50) NOT NULL  
If you are using Windows, please see how to set up the environment to compile the project locally. I also changed the approach used to generate sample data, because I had problems compiling the project locally. If you are using Windows, please see how to set up the environment to compile the project locally. I also changed the approach used to generate sample data, because I had problems compiling the project locally. I have used the JasperReport Studio v6.6.0 to create and compile the reports. java application I tried to keep the project as simple as possible. The pom.xml file will take care of all dependencies used on this project like Spring Boot, SolrLite and Jasper. The main class is the JasperExamplesApplication.java Inside the application access the client service to retrieve the list of clients ordering by name and another one grouping by country. Then it created a JasperReport data source object and they are added to the parameters map. The final part of the application it to generate the report itself. I call the fillReport method passing the main report and the parameters. The main report will call the two sub-reports. Then it called the exportReport to generate the PDF. You can find the generated PDF at resources directory. Page 2 You can't perform that action at this time. You signed in with another tab or window. Reload to refresh your session.
